velto

The Velto Playbook

Start with a plot. Deliver on its potential.

How developers capture the full value of a plot, together with their team, from the first day.

IMAGE TO COME

AI render of the example project: 180 homes on a real plot, with the facade and roof chosen in Velto. The same building grows through every page of this playbook.

Produced when render credits are back.

FOR DEVELOPERS

Example used throughout: 180 homes, approx. 15,000 m²

November 2026

© Velto 2026

velto.build

Your plot has more potential than most can see today.

Potential means the most value the plot can create. Your ambition sets the target. The requirements set the floor.

TARGET · YOUR AMBITION

A good place to live
Homes people want, that let and sell.

A good investment
Value that holds, risk that is known.

A sustainable building
Low CO2, built to last 50 years.

Your plot — The potential sits between the floor and the target

FLOOR · THE REQUIREMENTS

CO2 limit in BR18 · The local plan · Cost cap for social housing

Today it is hard to see and hard to deliver.

The decisions that settle it, building system, scope and materials, are made late, by parties working on separate data and insight. By then they are expensive to change, and nobody has worked out how the building could be built most efficiently and with the least risk. The real potential is never captured.

WHAT IF YOU WON BACK JUST ONE PERCENT AND ONE MONTH?

DKK 4.5m

DKK 2.7m · 1% of the project cost

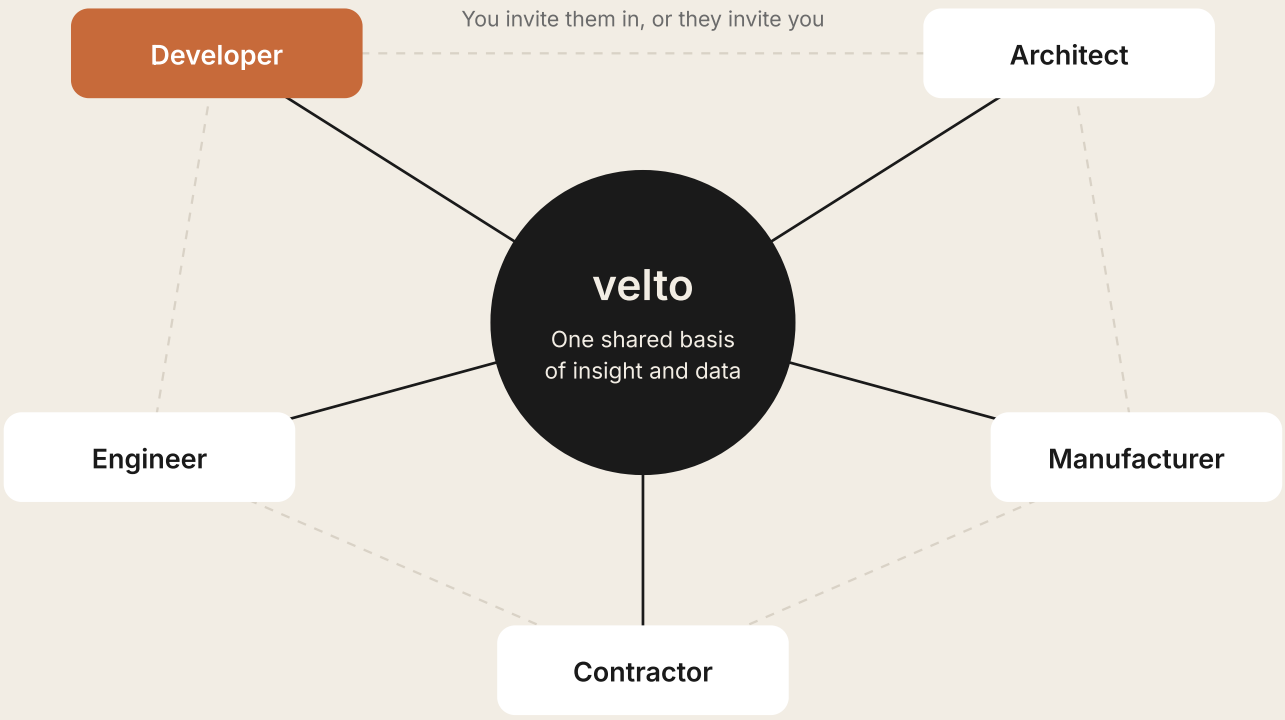

DKK 1.8m · one month of rent

On a single project with 180 homes. And that is only the cost.

The bigger prize is a better building: homes that let faster and hold their value, a building that stays within the CO2 limits as they tighten in 2027 and 2029, and a project investors and banks want to finance.

See the options from day one. Deliver them together.

With a few inputs, Velto makes the options visible from the first day on the plot: what can be built, which systems fit, and what each choice means for cost and CO2. Value, ambition and requirements steer every step, from the first plot to the final report.

You do not do it alone.

Invite your colleagues and partners, existing or new, from the start. Or a partner invites you in: an architect, an engineer or a manufacturer who sees what your plot could become and wants to realise it with you. Partners who work like this from day one are the partners worth building with.

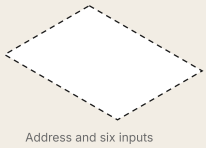

Decide early. Lock it. Deliver it.

Everyone works from the same insight and data, the conversation gets better, and the best solutions are found together. The result is locked in a Velto Report while the big decisions are still cheap to change. With Velto Deliver, the data then flows into the tools your team already works in, so nobody loses the overview on the way to a finished building.

From an address to a building you can deliver.

With a few inputs, Velto shows the options from the first day and brings your team together to deliver them.

VELTO.BUILD

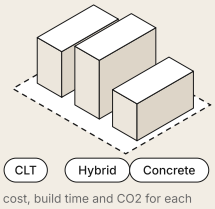

Address and six inputs

1

Your plot

Start with an address.

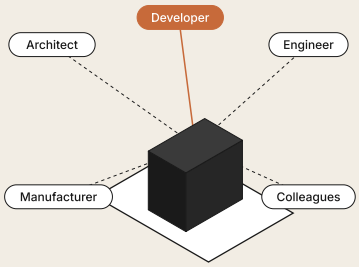

cost, build time and CO2 for each

2

See the options

Systems and materials side by side.

3

Choose together

The whole team on the same data and insight.

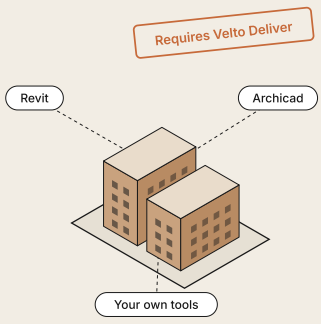

4

Lock the decisions

Captured and dated in a Velto Report.

VELTO DELIVER

5

Deliver the potential

In the tools you already use, on a stronger shared basis.

Your architect and engineer keep working in the tools they know. A plugin carries the decisions from the Velto Report into their models, so the whole team builds on the same basis.

Velto Deliver is being built with co-creation partners.

Seven steps from a plot to a team ready to deliver.

In Velto · Around the table — Some steps happen in the app, some in the room. Both count.

01 · VELTO.BUILD · CAPTURE THE POTENTIAL

1. **Set your ambition** — Around the table
   Decide what the plot should achieve.
2. **Start with the plot** — In Velto
   Six inputs show what the plot can hold.
3. **Bring in your team** — In Velto
   Invite the people who will deliver it, or accept their invitation.
4. **Compare the options** — In Velto
   See every system side by side before anyone draws.
5. **Choose together** — Around the table
   Agree the direction in one meeting, on the same numbers.
6. **Qualify the team** — Around the table
   Check that your team can deliver what you chose.
7. **Lock it in the Velto Report** — In Velto
   Lock the decisions so they carry into design.

↓

02 · VELTO DELIVER · DELIVER THE POTENTIAL

Take the decisions into design. A plugin carries them into the tools your architect and engineer already use, and you follow every change.

Decide what the plot should achieve.

TARGET · YOUR AMBITION, RANKED 1 TO 3

Good to live in ☐

Who will live here, and what makes them stay?

Good investment ☐

What return, and over how many years?

Sustainable ☐

How far below the CO2 limit do you want to be?

Your plot

FLOOR · THE REQUIREMENTS YOU MUST MEET

- ☐ CO2 limit in BR18
- ☐ The local plan
- ☐ Cost cap, if social housing

WHAT YOU DO

Rank the three drivers for this project and write one sentence for each. Note the requirements you must meet.

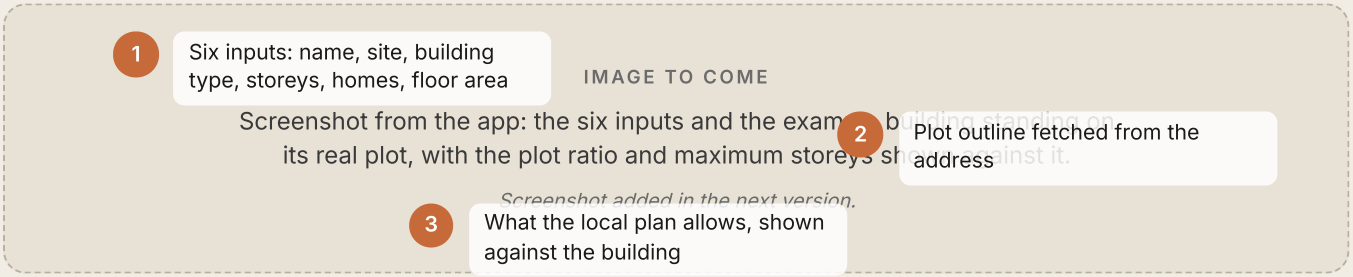

WHAT YOU GET

A clear brief that steers every choice that follows, and that partners can check their proposals against.

TIP

Be specific. "Rent at DKK 10,000 per home a month" steers better than "attractive homes".

Six inputs show what the plot can hold.

WHAT YOU DO

Enter the address and six facts about the project. Check the plot outline Velto fetches.

WHAT YOU GET

A first building on your real plot, measured against what the local plan allows.

TIP

Rough numbers are fine. Change any input later and everything updates.

Invite the people who will deliver it, or accept their invitation.

WHAT YOU DO

Invite colleagues and partners into the project. The ones you know, and the ones with the skills you lack.

WHAT YOU GET

One shared space where everyone sees the same plot, the same numbers and the same options.

TIP

Invite before the first sketch. That is when a partner's input is cheapest and worth the most.

See every system side by side before anyone draws.

1 One configuration per option

IMAGE TO COME

Screenshot from the app: three configurations of the example building side by side, CLT, hybrid and concrete, with cost and CO2 as ranges, each with its source and the chosen facade on the 3D model.

2 Cost and CO2 as ranges, each with its source

3 Facade and roof, so the numbers come with a picture

Screenshot added in the next version.

WHAT YOU DO

Make two or three configurations. Change the mix and watch cost and CO2 move.

WHAT YOU GET

A comparison you can trust, because every number says where it comes from.

TIP

Keep one configuration as the way you would normally build. It makes the difference visible.

Agree the direction in one meeting, on the same numbers.

A 30-MINUTE AGENDA

0 TO 5 MIN	5 TO 15 MIN	15 TO 25 MIN	25 TO 30
Ambition	**The options**	**Trade-offs**	**Decision**
The brief from step 1, read out loud.	The configurations from step 4, on the screen.	What each option gives and costs against the ambition.	One direction, written down.

WHO IS IN THE ROOM

You, and the partners you invited in step 3.

ON THE SCREEN

Your Velto project. Everyone sees the same numbers.

OUT OF THE ROOM

A direction, and who checks the team in step 6.

WHAT YOU DO

Meet with Velto on the screen. Go through ambition, options and trade-offs, and decide on a direction.

WHAT YOU GET

A direction everyone has seen the numbers for, so it holds when the design starts.

TIP

Ask the chat in Velto during the meeting. It answers from the project's own numbers.

Check that your team can deliver what you chose.

ASK THE TEAM	YES	NO
Has the team built this system before?	☐	☐
Is the engineer in early enough to make it buildable?	☐	☐
Do we know who supplies the main products?	☐	☐
Can the contractor price it with confidence?	☐	☐

ANY NO?

Bring it in

Invite a partner who has done it, into the same Velto project.

or

Build it in-house

Decide who learns it, and when.

WHAT YOU DO

Go through the checklist with your team. Where the answer is no, decide how to close the gap.

WHAT YOU GET

A team that matches the solution, instead of a solution bent to fit the team.

TIP

Ask the partners in your project who knows the system. Hybrid needs other skills than concrete.

Lock the decisions so they carry into design.

OVERVIEW

All configurations side by side

Image to come

CLT · HYBRID · CONCRETE

One page per configuration

ASSUMPTIONS

What this report assumes

3D PICTURE

The building, as chosen

Image to come

Every report carries the date and time it was generated, so everyone knows which version was agreed.

Generated 6 Nov 2026, 14:32

Invited collaborators can download it too. The report is meant to travel.

WHAT YOU DO

Generate the Velto Report when the direction is set. Share it with your team, your investors and your bank.

WHAT YOU GET

A dated record of what was decided and why, that sets the direction for every partner.

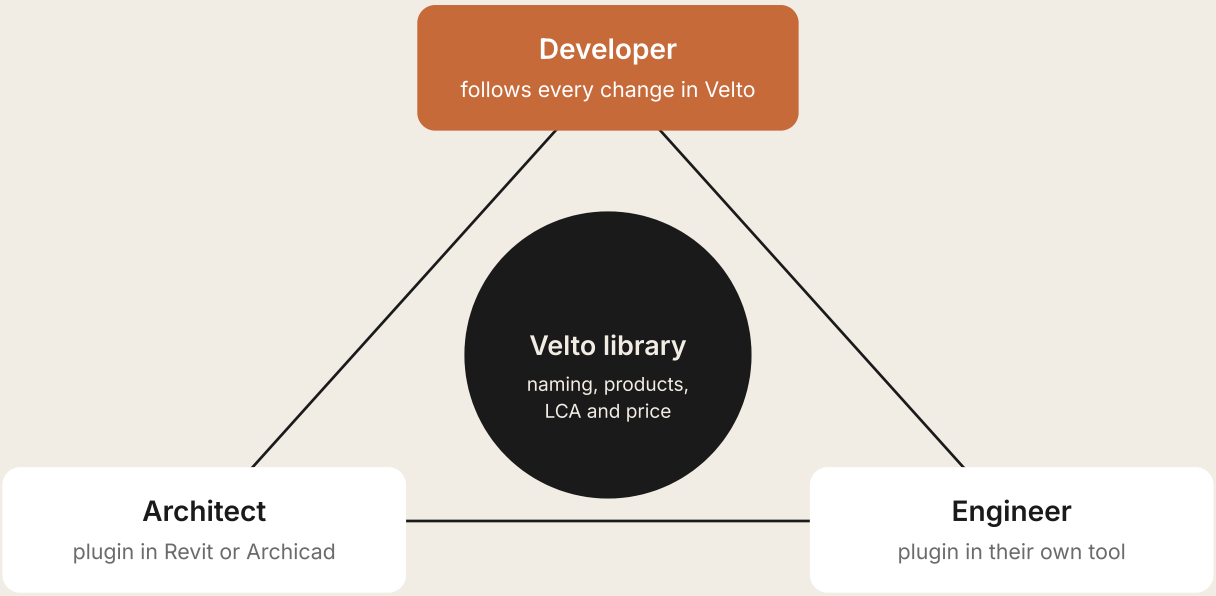

TIP

Generate a new report at each milestone. The date stamp shows which version was agreed.

Next · Velto Deliver

Take the potential into design without losing it.

The report sets the direction. Velto Deliver keeps it as the architect and engineer turn it into a building.

Two models that know about each other

PLUGIN
Works inside the tools your team already uses. Nothing new to learn.

DESIGN TEAM
A change by the engineer reaches the architect at once, first-hand.

VELTO LIBRARY
One standard for naming, products, LCA and price, across every firm.

DEVELOPER
Sees what each change does to cost and CO2, while it can still be steered.

Velto Deliver is being built with co-creation partners. Want to shape it around your projects?

Book a meeting

velto

BEFORE YOU START

Have three things ready.

1 **Your ambition**
The three drivers, ranked, with one sentence each. Step 1 shows how.

2 **The address**
Velto fetches the plot and the plan rules from it.

3 **Your team list**
Colleagues and partners to invite, and the skills you are still missing.
